AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 21, line 10, with the following rewritten paragraph:

--If the method is not found at step ~~306~~ 304, processing continues at step 308 to get a superclass of the current class. The superclass becomes the current class. At step 310, a determination is made whether the current class is the originating superclass (e.g., java.awt.Component). If so, processing continues at step 314 to mark the screen element as not supporting device input. Processing ends at step 316. If it is determined, at step 310, that the current class is not the originating superclass, processing returns to step 304 to examine the current class for the device method.--
